

Java Servlet Setup

IntelliJ Ultimate is needed to run Tomcat.

Install Tomcat 9.0.62: <https://tomcat.apache.org/download-90.cgi>

Note: Tomcat 10 does not work properly so please do not install that version.

Create a new project with the following configuration:

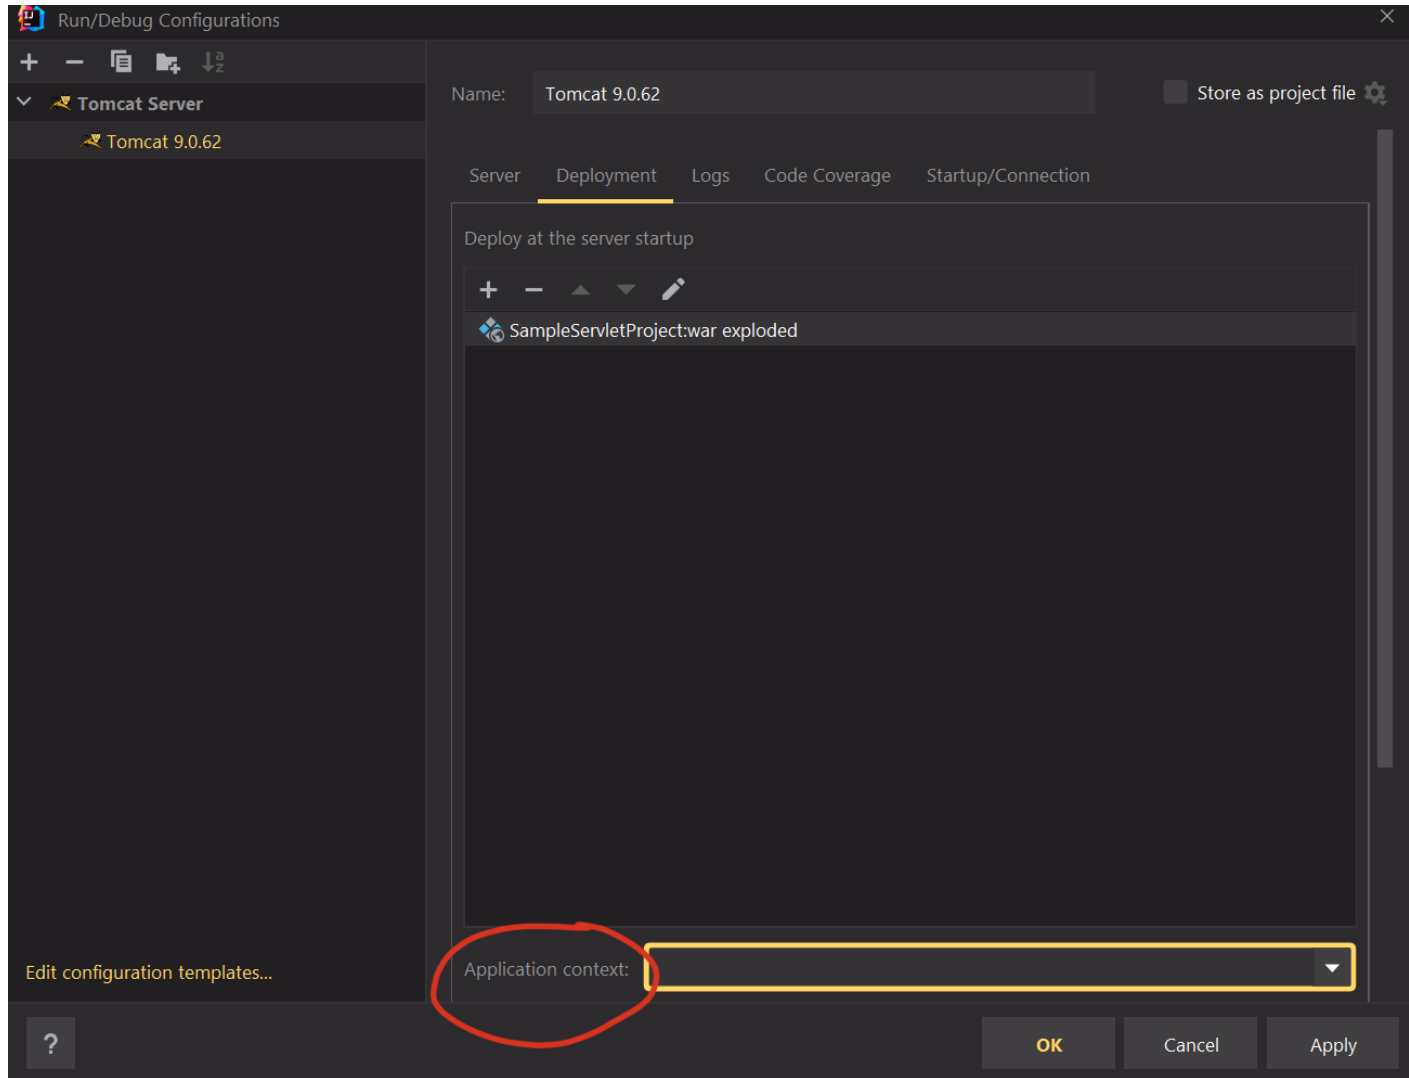

The image shows the 'New Project' dialog in IntelliJ IDEA. On the left is a list of project types, with 'Web' selected. The right side contains configuration fields for the new project.

Field	Value
Name	SampleServletProject
Location	Z:\Day 5 - Web Applications and Servlet\demos\SampleServletProject
Project template	Web application (Servlet, web.xml, index.jsp)
Application server	Tomcat 9.0.62
Language	Java
Build system	Maven
Test framework	JUnit
Group	com.example
Artifact	SampleServletProject
Project SDK	1.8 java version "1.8.0_311"

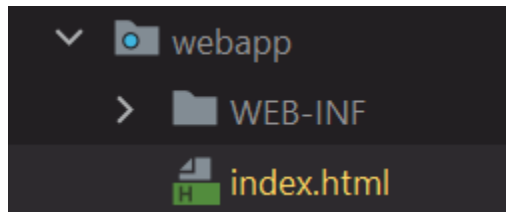

At the bottom are four buttons: Previous, Next, Cancel, and Help.

Click on **Next** -> **Finish**, no extra dependencies are needed.

When editing your Tomcat configuration, you can leave the **Application context** blank.

Rename the index.jsp file to **index.html**

Click on the **Run icon** to run the project.
